New Orthodontics Trends: Invisalign

Invisalign treatment will consist of a series of aligners that you switch out about every two weeks. Each aligner is individually manufactured with exact calculations to gradually shift your teeth into place. And since your Invisalign system is custom-made for your teeth and your teeth only, with a plan devised by you and your dentist or orthodontist, you know you'll end up with a smile that truly fits.

New Orthodontics Trends: **Invisalign**

Invisalign is the best way to transform your smile without interfering with your day-to-day life. Check out the benefits below:

- Effective:** Even before your invisalign treatment is finished, your teeth alignment will improve and you'll begin enjoying the benefits of a better smile.
- Comfort:** With invisalign, the edges are smooth so they won't irritate your gums or cheeks.
- Clarity:** Invisalign is virtually invisible so hardly anyone will even know you're straightening your teeth.
- Removability:** You can remove invisalign aligners to eat, drink, brush and floss or for special occasions.
- Customized:** Your doctors will take precise impression and customize your aligners for your teeth.

Treatment comparison

	Invisalign	Metal Braces
How does it work?	Invisalign uses a series of clear removable aligners to straighten your teeth without braces, metal wires or brackets.	Metal braces use wires and brackets to pressure your teeth into straighter alignment.
Nearly invisible	✓	No. Metal braces are usually noticeable.
Removable during treatment	✓	No. You can not remove braces until treatment is completed.
Treatment doesn't involve metal that can irritate teeth and gums	✓	No. The metal wires and brackets used with braces can cause mouth irritation.
Allows you to brush and floss normally during treatment.	✓	No. Braces hinder the ability to reach the entire tooth/gum area when brushing and flossing.
